Computers are available. A computer might be a desktop or a laptop. Each computer comes with at least one operating system and the option to install other programs. An operating system is a piece of software with a name. Software has a unique ID. Some components, such memory, sound cards, and video cards, can be supported by software. Memory's attribute size, the sound card's driver name, and the video card's video memory size are all different. If a computer is a laptop, it has more memory and battery power. Each laptop has to have memory, and a laptop is necessary for memory to exist. A desktop computer has an attribute power consumption. Additionally, various accessories may be sold alongside computers. Each attachment has a unique ID and cannot be purchased separately. Accessories include things like keyboards with certain key types, monitors with specified resolutions, and optical or laser mice.
